

ABSTRACT

A perfectly waterproofed printing and copying sheet according to the present invention comprises a sheet of paper having high degree
5 water-resisting property which has a front surface dry-laminated with a colorless transparent film of water-resisting heat-resisting synthetic resin and a back surface dry-laminated with a colorless transparent film of water-resisting heat-resisting synthetic resin or a back surface coated with a layer of water-resisting adhesives to which a releasing paper is affixed.

10 In the perfectly waterproofed printing and copying sheet, the front surface, back surface and side surfaces owing to the thickness of the sheet are perfectly waterproofed.
